**TOWARDS NEW STANDARDS IN EFFICIENCY, RELIABILITY & SERVICEABILITY**

**HEAT  
EXCHANGER**

**FRESH WATER  
GENERATOR**

**SEPARATOR**

**Why  
Choose  
Alfa  
Laval**

We specialize in providing service and supply for Alfa Laval heat exchangers, separators, and fresh water generators. With our expertise, we ensure optimal performance, reliability, and longevity of your equipment, helping you maintain efficiency and sustainability in your operations. Trust us for quality solutions that keep your systems running at their best.

**FEEL FREE TO

INFORMATION  
ABOUT OUR  
PRODUCT**

Empowering industries with innovative solutions to purify, refine, and recycle materials.

We optimize processes for responsible growth, driving progress while supporting our customers in achieving their business goals and sustainability targets—going the extra mile, every time.

**Alfa Laval Plate Heat Exchangers (PHE)** are widely used in the upstream oil and gas industry for their efficiency, compact design, and superior thermal performance. These heat exchangers are crucial for maintaining optimal temperatures in offshore platforms, FPSOs, and onshore processing facilities.

**High Thermal Efficiency:** Maximizes heat transfer with a compact footprint.

**Space-Saving Design:** Ideal for offshore applications where space is limited.

**Easy Maintenance & Cleaning:** Allows for quick servicing and extended operational life.

**Corrosion-Resistant Materials:** Designed to withstand harsh offshore and onshore environments.

**Energy Efficiency & Sustainability:** Reduces operational costs and environmental impact.

**Alfa Laval Fresh Water Generators (FWG)** are essential for offshore platforms, FPSOs, and remote oil and gas facilities where access to fresh water is limited. These systems convert seawater into high-quality fresh water, ensuring a reliable supply for drinking, process operations, and utility use.

**High Efficiency:** Ensures precise oil, water & solids separation for optimal operations and compliance.

**Robust & Reliable:** Designed for durability in harsh offshore and onshore conditions.

**Compact Design:** Space-efficient, ideal for offshore platforms and FPSOs.

**Cost & Energy Saving:** Reduces expenses by improving separation efficiency.

**Alfa Laval Separators** are essential equipment in the upstream oil and gas industry, providing effective separation of oil, water, and solids. These separators play a crucial role in improving efficiency, ensuring environmental compliance, and optimizing production processes. Alfa Laval offers a wide range of separators tailored to meet the demands of offshore platforms & FPSOs.

**Efficient & Reliable:** Uses heat transfer and vacuum distillation for effective freshwater production.

**Compact Design:** Ideal for space-limited offshore installations.

**Energy Saving:** Utilizes waste heat to reduce operational costs.

**High-Quality Output:** Meets international water standards.

**Eco-Friendly:** Reduces plastic waste and dependence on external water sources.
